

YOUR ENERGY CHECKLIST

CORE Helps Your BUSINESS Cut Energy Bills

- ✓ **Thermostats***: Program to match occupancy hours. For unoccupied buildings, turn down to 50 degrees to save energy while keeping pipes from freezing.
- ✓ **Rooftop HVAC units**: Check economizers, verifying that dampers are opening and closing properly, not stuck in a stationary position.
- ✓ **Equipment**: Unplug from outlets if not in use or put plug loads on advanced power strips.
- ✓ **Air filters + coils**: Replace filters* and clean coils on HVAC and refrigerator units to keep equipment running at top efficiency.
- ✓ **24/7 lighting**: Put on occupancy and vacancy sensors.*
- ✓ **LED lighting**: Replace old bulbs with LED lighting.*
- ✓ **Heat tape + snowmelt systems**: Turn off at breakers.
- ✓ **Building automation systems**: Set to “unoccupied,” especially in schools and buildings that are completely empty.
- ✓ **Utilities’ online portals**: Many utilities have interactive sites to review usage. Log in to check if changes are paying off.
- ✓ **FREE energy advising**: Connect with CORE!

**YOU ARE
POWERFUL.
TAKE ACTION.**
